      "website": "http://www.mazdigital.com/",
      "start": "January 2012",
      "end": "May 2017",
      "summary": "MazDigital.com is a digital publishing platform that allows magazine publishers to have interactive iOS/Android apps without any technical knowledge, via a DIY interface. It currently powers magazines like Forbes and OK! I joined the founders when it was a prototype (the first dev, other than the founders), and grew it to what it is today - a scalable platform, used by hundreds of publishers to serve digital content to millions of end users, on tablets and mobile devices. We have added a range of new products for Apple TV, Roku, Fire TV and Apple Watch! Other than that we have tried our hands at consumer products as well, which started as a mobile first browser, with some really cool features and evolved into a social network built around content sharing - Lynx!"
